Improving on teachers' digital competence and digital readiness will develop higher-quality teacher education and create further learning opportunities.

COVID-19 has accentuated the need for VET education to be provided in online or hybrid form. This necessity has outlined challenges as online teaching and learning does not enhance non-verbal interaction. Communication between students and teachers has become increasingly challenging and harder to facilitate.

Tools4teaching aims to:
•Create more awareness about the opportunities of online education.
•Create an open mindset towards online education among teachers/trainers.
•Provide practical tools to facilitate online teaching to engage with learners and create a supportive learning environment.

Our Mission is to address the day-to-day realities of today's educator in relation to online learning and teaching challenges . We aim to incorporate our research into a practical fresh approach so that end users are provided with the engaging, active and balanced education they need to reach their full and unique potential.

TOOLS 4 TEACHING

www.tools4teaching.eu

Is delivering your online training challenging the need to enhance your instructional skills?

Tools4teaching is an online space for teachers who want to learn about innovative tools, methods and techniques for online teaching. One of the biggest challenges to online teaching is keeping students attentive and engaged. Teaching online requires different methods to the traditional classroom, so it is key that teachers adapt and develop their skills to the online learning environment to be effective and to engage learners.

We aim to provide tools which every teacher can embrace to enhance their teaching method.

In order to engage learners, new skills and decisively improving performance are vital . The tools provided will be based on reliable principles and focused, results-driven approach.

To reach these objectives we aim to develop:

•an Online Toolkit – with easy to use, simple and straightforward tools, activities and ideas that can be implemented in online classes. The objective is that you can make remote students still feel part of your class even though they are learning from home.

• an Online E-book - showcasing teacher experiences of this Toolkit, outlining what impact this has had on their education and teaching methods. It will highlight the benefits in putting forward a more pragmatic approach to make the most of digital tools.
